PROFESSIONAL SUMMARY

Application Security Engineer building DevSecOps security automation, grounded in backend engineering. Promoted at BSI UII from Software Developer intern to Application Security Engineer on the SOC/CSIRT team after shipping backend APIs, vulnerability-management workflows, and security-scanning proof-of-concepts. Portfolio at daudhr.com documents practical work across Go, PHP/Laravel, Kubernetes, OpenBao, GitOps, Linux security automation, and scanner-driven delivery pipelines.

TECHNICAL SKILLS

Backend: Go (Golang), PHP, Laravel, REST APIs, Microservices, SQL

DevSecOps: Secure SDLC, CI/CD Security, SAST, SCA, Secret Scanning, Container Scanning, SBOM, IaC Policy

Infrastructure: Docker, Kubernetes, Kind, Istio, OpenBao, Flux CD, Ansible, Linux, Nginx

Cloud & Automation: Google Cloud Platform (GCP), Cloudflare Workers, Bash, Google Apps Script

Tools: Git, GitHub Actions, GitLab CI, Jenkins, Postman, Trivy, Gripe, GitLeaks, Semgrep, Syft

WORK EXPERIENCE

Application Security Engineer — SOC/CSIRT Team (Contract)

Jan 2026 – Present

Badan Sistem Informasi UII

Yogyakarta, Indonesia

- Designed Secure SDLC guidance covering secure coding standards, security testing protocols, and CI/CD checkpoints for 7 internal development teams
- Built DevSecOps pipeline proof-of-concepts integrating SAST, dependency scanning, container scanning, and secret scanning across 2 repositories
- Developed a web-based vulnerability assessment management system for SOC/CISRT workflows, centralizing security findings and remediation follow-up
- Produced rollout documentation so developers can run repeatable security checks before deployment without waiting for manual SOC review

Software Developer — Internship

Jan 2025 – Dec 2025

Badan Sistem Informasi UII

Yogyakarta, Indonesia

- Maintained and enhanced legacy KUI scholarship service backend supporting scholarship disbursement operations for 500+ students across 5+ programs
- Developed REST API endpoints for scholarship application workflows, including business logic, database queries, and internal finance-system integrations
- Optimized backend query and response patterns to improve maintainability and reliability for production scholarship services
- Automated domain unblock workflow using Google Apps Script, replacing 3–5 manual email requests per week with a self-service form

CERTIFICATIONS

IDCamp 2024 — DevOps Engineer (Expert)

Jan 2025

Bangkit Academy 2024 — Cloud Computing

Jul 2024

Google IT Support Professional Certificate

Mar 2024

EDUCATION

Universitas Islam Indonesia

Yogyakarta, Indonesia

Bachelor of Informatics, GPA 3.70/4.00

Aug 2021 – Jan 2026

PROJECTS

DevSecOps Security Scanning Pipeline | *Bash, GitHub Actions, Trivy, Semgrep, GitLeaks, Syft* daudhr.com

- Built public Secure SDLC boilerplate that runs SAST, secret scanning, dependency/container scanning, SBOM generation, and IaC policy validation locally and in CI/CD.

Self-Hosted DevSecOps Lab | *Kind, Istio, OpenBao, Flux CD, Tailscale* daudhr.com

- Created reproducible Kubernetes lab for practicing GitOps, service mesh, secrets management, network policy, private access, and security-scanning workflows.

Linux Security Audit Automation | *Shell, Lynis, Fail2ban, auditd, msmtplib* daudhr.com

- Automated weekly host security reports covering hardening checks, brute-force protection, audit logging, package integrity, account hygiene, and optional email delivery.
